A reduced-scale NOAA nautical chart for small boaters

When possible, use the full-size NOAA chart for navigation.

- Complete, reduced-scale nautical chart
- Print at home for free
- Convenient size
- Up-to-date with Notices to Mariners
- Compiled by NOAA’s Office of Coast Survey, the nation’s chartmaker
What are Nautical Charts?

Nautical charts are a fundamental tool of marine navigation. They show water depths, obstructions, buoys, other aids to navigation, and much more. The information is shown in a way that promotes safe and efficient navigation. Chart carriage is mandatory on the commercial ships that carry America’s commerce. They are also used on every Navy and Coast Guard ship, fishing and passenger vessels, and are widely carried by recreational boaters.

What is a BookletChart™?

This BookletChart is made to help recreational boaters locate themselves on the water. It has been reduced in scale for convenience, but otherwise contains all the information of the full-scale nautical chart. The bar scales have also been reduced, and are accurate when used to measure distances in this BookletChart. See the Note at the bottom of page 5 for the reduction in scale applied to this chart.

Whenever possible, use the official, full scale NOAA nautical chart for navigation. Nautical chart sales agents are listed on the Internet at http://www.NauticalCharts.NOAA.gov.

This BookletChart does NOT fulfill chart carriage requirements for regulated commercial vessels under Titles 33 and 44 of the Code of Federal Regulations.

Notice to Mariners Correction Status

This BookletChart has been updated for chart corrections published in the U.S. Coast Guard Local Notice to Mariners, the National Geospatial Intelligence Agency Weekly Notice to Mariners, and, where applicable, the Canadian Coast Guard Notice to Mariners. Additional chart corrections have been made by NOAA in advance of their publication in a Notice to Mariners. The last Notices to Mariners applied to this chart are listed in the Note at the bottom of page 7. Coast Pilot excerpts are not being corrected.

(Selected Excerpts from Coast Pilot)

Chesapeake Bay, the largest inland body of water along the Atlantic coast of the United States, is 168 miles long with a greatest width of 23 miles. The bay is the approach to Norfolk, Newport News, Baltimore, and many lesser ports. Deep-draft vessels use the Atlantic entrance, which is about 10 miles wide between Fishermans Island on the north and Cape Henry on the south. Medium-draft vessels can enter from Delaware Bay on the north via Chesapeake and Delaware Canal, and lightdraft vessels can enter from Albemarle Sound on the south via the Intracoastal Waterway.

The waters surrounding a vessel that is carrying liquefied petroleum gas are a safety zone while the vessel transits the Chesapeake Bay and

NOTE F

TRAFFIC SEPARATION SCHEME

The traffic separation scheme is designed to aid in the prevention of collisions at the approaches to Chesapeake Bay and does not supersede or alter the applicable Rules of the Road.

The RECOMMENDED routes for entering and departing from Chesapeake Bay are shown on this chart. The Northeast Approach is marked by a line of soundings which separates the channels of inbound and outbound vessels. Vessels should use the southbound channel.

It is RECOMMENDED that the following ships use the Southern Approach deep-water route when bound for Chesapeake Bay from sea or to sea from Chesapeake Bay: Deep-draft ships, vessels of more than 200 feet and greater in length, and vessels carrying cargo shall not use the deep-water route when, in their master's judgment, the effects of ship character, size, speed, and prevailing environmental conditions may cause the draft of the ship to exceed 15 feet (4.5 meters).

It is RECOMMENDED that a ship using the deep-water route announce its intention on VHF-FM channel 16 as it approaches the Southern Approach Entrance Lighted Whistle Buoy "CO", on the north end of the route. Avoid, as far as practicable, overtaking other ships operating in the deep-water route.

Keep as near to the outer limit of the route which lies on the starboard side as is safe and practicable.

All other ships approaching the Chesapeake Bay traffic separation scheme should use the appropriate inbound or outbound traffic lane of the traffic separation scheme.

Traffic within the precautionary area may consist of vessels operating between Thimble Shoal and Chesapeake Channel and one of the specified traffic lanes. Mariners are advised to exercise extreme care in navigating within this area. The normal pilot boarding area is outlined by a magenta band.

Use NOAA electronic navigational charts for the most up-to-date information.

NOTE F

TRAFFIC SEPARATION SCHEME

The traffic separation scheme is designed to aid in the prevention of collisions at the approaches to Chesapeake Bay and does not supersede or alter the applicable Rules of the Road.

The RECOMMENDED routes for entering and departing from Chesapeake Bay are overlaid on this chart. The Northeast Approach is marked by a tinted magenta line centered on a line of buoys which separates the courses of inbound and outbound vessels. Vessels should leave all buoys on their port hand.

It is RECOMMENDED that the following ships use the Southern Approach: Deep-water route when bound for Chesapeake Bay from east or east-southeast from Chesapeake Bay. Deep-draft ships, drafts defined as 40 feet (12.2 meters) or greater in fresh water, and naval aircraft carriers. Ships drawing less than 40 feet (12.2 meters) may use the deep-water route when, in the master's judgment, the effects of ship characteristics, its speed, and prevailing environmental conditions may cause the draft of the ship to equal or exceed 40 feet (12.2 meters).

It is RECOMMENDED that a ship using the deep-water route:
- Announce its intention on VHF/FM Channel 16 as it approaches Chesapeake Bay Southern Approach Lighted Whistle Buoy "CG" on the south end, or Chesapeake Bay Entrance Lighted Whistle Buoy "GH", on the north end of the route.
- Avoid, as far as practicable, overtaking other ships operating in the deep-water route.
- Keep to the outer limit of the route which lies on the starboard side as a safe and practicable
- For other ships approaching the Chesapeake Bay traffic separation scheme should use the appropriate inbound or outbound traffic lane of the traffic separation scheme.

Traffic within the precautionary area may consist of vessels operating between Thimble Shoal and Chesapeake Channels and one of the selectable traffic lanes. Mariners are advised to exercise extreme care in navigating within this area. The normal Pilot Boarding Area is outlined by a magenta band.
NOTE E
TRAFFIC SEPARATION SCHEME
One-way traffic lanes superimposed on this chart in the vicinity of Smith Point are
RECOMMENDED for all vessels except small craft. They have been designed to aid in
prevention of collisions and are not intended in any way to supersede or alter the
applicable Rules of the Road. The recommended route is marked by a takeaway buoy
and a red megaphone band which separates the course of inbound and outbound vessels.
Vessels should leave the buoy on their port bow.
Note: Chart grid lines are aligned with true north.
Note: Chart grid lines are aligned with true north.
VHF Marine Radio channels for use on the waterways:

Channel 6 – Inter-ship safety communications.
Channel 9 – Communications between boats and ship-to-coast.
Channel 13 – Navigation purposes at bridges, locks, and harbors.
Channel 16 – Emergency, distress and safety calls to Coast Guard and others, and to initiate calls to other vessels. Contact the other vessel, agree to another channel, and then switch.
Channel 22A – Calls between the Coast Guard and the public. Severe weather warnings, hazards to navigation and safety warnings are broadcast here.
Channels 68, 69, 71, 72 and 78A – Recreational boat channels.

Getting and Giving Help — Signal other boaters using visual distress signals (flares, orange flag, lights, arm signals); whistles; horns; and on your VHF radio. You are required by law to help boaters in trouble. Respond to distress signals, but do not endanger yourself.

Distress Call Procedures

• Make sure radio is on.
• Select Channel 16.
• Press/Hold the transmit button.
• Clearly say: “MAYDAY, MAYDAY, MAYDAY.”
• Also give: Vessel Name and/or Description; Position and/or Location; Nature of Emergency; Number of People on Board.
• Release transmit button.
• Wait for 10 seconds — If no response Repeat MAYDAY call.

Have all persons put on life jackets!

NOAA Weather Radio All Hazards (NWR) is a nationwide network of radio stations broadcasting continuous weather information directly from the nearest National Weather Service office. NWR broadcasts official Weather Service warnings, watches, forecasts and other hazard information 24 hours a day, 7 days a week.
